

FIG. 1

```

graph TD
    28[LOOK UP N, B ~ 28] --> 30{N ≥ B? ~ 30}
    30 -- YES --> 32[T = 1 ~ 32]
    30 -- NO --> 40[DETERMINE L ~ 40]
    40 --> 42["T = L(1 - N/B) ~ 42"]
    32 --> 34[MONITOR FIFO ~ 34]
    42 --> 34
    34 --> 36{HAVE T BYTES ARRIVED? ~ 36}
    36 -- NO --> 34
    36 -- YES --> 38[BEGIN RELAY ~ 38]
  
```

FIG. 2

```

graph TD
    28[LOOK UP N, B ~28] --> 30{N ≥ B? ~30}
    30 -- YES --> 32[T = W ~32]
    30 -- NO --> 40[DETERMINE L ~40]
    40 --> 42["T_c = L(1 - N/B) ~42"]
    42 --> 44["T = max(T_c, w, D) ~44"]
    44 --> 46["T = ROUND UP TO MULTIPLE OF W ~46"]
    32 --> 34[MONITOR FIFO ~34]
    46 --> 34
    34 --> 36{HAVE T BYTES ARRIVED? ~36}
    36 -- NO --> 34
    36 -- YES --> 38[BEGIN RELAY ~38]

```

FIG. 3

Normalized Time	Bytes added to FIFO	Bytes transferred	Bytes accumulated in FIFO	Bytes received	Notes
1	1	0	1	0	Start receiving datagram FIFO (at a rate of 1 byte per time unit)
2	1	0	2	0	
3-33	...	0	...	0	Continue receiving datagram
34	1	0	34	0	Controller has now received enough of the header to determine that L=200 bytes
35	1	0	35	0	
36-99	...	0	...	0	
100	1	0	100	0	Enough bytes accumulated in FIFO to begin relay.
101	1	2	99	2	Controller indicates transfer size and begins relay to receiving network.
102	1	2	98	4	Each time unit from here on,
103	1	2	97	6	1 byte will be received
104-109	In the FIFO and 2 bytes will be written to host memory
150	1	2	50	100	
152-100	
200	1	2	2	200	Relay to receiving network is complete
